Annual Customer Revenue Review

Finance team - Fiscal year 2026 | Tenant T1 | Source type: structured table + commentary

Context

This financial review contains a relational table embedded inside a PDF. A robust ingestion pipeline should not treat the entire document as plain text. Instead, it should extract the table rows and preserve their schema while also indexing the written commentary.

The figures below are annual revenue values denominated in Indian rupees (INR). C501 and C502 are stored in the customer master file, but their 2026 revenue appears only in this report.

Revenue table

customer_id	fiscal_year	annual_revenue	tenant_id
C501	2026	17500000	T1
C502	2026	9500000	T1

Analyst commentary

C501 - Sunbeam Systems exceeded the one-crore annual revenue threshold. This information is relevant to structured revenue queries even though it arrived in PDF form.

C502 - Orion Logistics remained below the one-crore threshold. The revenue values must be preserved as numbers for filtering and aggregation, not inferred later from an embedding.
